Project Executable Files

Date	30 September 2026
Team ID	SWTID-2026-9166
Project Name	AI FitTrack
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	yes
2	README / Setup Guide (instructions to run the project)	yes
3	requirements.txt / package.json / dependency file	yes
4	Database schema / seed files (if applicable)	yes
5	Environment configuration file (.env.example or similar)	yes
6	Deployed application URL (if hosted)	yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	Yes/N/A
8	Dockerfile / Containerization config (if applicable)	Yes/N/A
9	Test files and test results	yes
10	Demo video or walkthrough (if required)	yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
AI-BlogNest-API/
│
├── src/
│   ├── controllers/
│   ├── routes/
│   ├── models/
│   ├── services/
│   ├── middleware/
│   └── config/
│
├── tests/
│   ├── api-tests/
│   └── performance-tests/
│
├── docs/
│   └── API-documentation
│
├── .env.example
├── README.md
├── requirements.txt / package.json
└── database/
    └── schema / seed files
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Local Environment
Login Credentials (Demo)	API project
Platform / Hosting Provider	Local / Development Environment
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.x / Node.js
- Git
- Required dependencies
- Database, if applicable

Step 1:
Clone the project repository:git clone <repository-url>

Step 2:
Open the project folder:cd AI-BlogNest-API

Step 3:
Install dependencies.
Python:pip install -r requirements.txt
Node.js:npm install

Step 4:
Configure environment variables:copy .env.example .env
Then update the required API/database configuration in .env.

Step 5:
Start the application.
Python example:python app.py
Node.js example:npm start

Step 6:
Open/test the API using:
http://localhost:8000

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI content generation may take additional time for complex requests	Optimized API processing; acceptable response time
2	Performance may decrease under very high concurrent requests	Load testing performed; caching and optimization recommended
3	API requires valid environment/API configuration	Configure .env before running the application
